Contract Compliance

The core values of A.M. Engineering is part of the ambition that unites our engineers and team members with owners to employ the utmost professional services for every project. It partners us with public sector clients at every level and private sector clients in every industry. We have a proven track record of possessing the ability to successfully complete large and small scale projects in order to meet our client's needs and project goals, regardless of size. We administer thorough team management to maintain project conformity, while assisting the owner in orchestrating all project initiatives to maintain our belief in a single-source of project responsibility. We take projects from start to finish. Here at **A.M. Engineering**, we also understand that public works projects require its consultants to have project role flexibility. Either by employing all our main services to lead your project from conceptual to construction or to taper back our services to coincide with a limited project budget. **We warp our services to fit your needs.** It is our experience that offering our clients one base for project responsibility further allows our projects to reduce costs and change orders, while increasing aesthetics. This is done by the Design Engineer actively involved in the construction phase as the Construction Manager. Addressing unknowns as they arise and ensuring the contractor is meeting project goals, while we progressively work with them to accomplish a successful project as **ONE TEAM**.
